

Nothing Plugin Installation Guide

Need help? Email us at support@stickz.co

Windows Installation

To install the Nothing plugin, drag and drop the **Nothing.vst3** file into your VST3 folder.

Most DAWs auto-create the VST3 folder for you, so by default, the file path is:
C:\Program Files\Common Files\VST3

If you're using a custom location for your VST3 files, you'll have to drop our VST3 file into your custom folder.

Once you dragged the **Nothing.vst3** file into your VST3 folder, all you need to do is reload your DAW and re-scan your plugins. That's it!

Compatibility/Requirements

- x64-compatible CPU (64-bit)
- VST3-compatible DAW (VST2 is not supported)
- 2 GB RAM
- Windows 8 or higher
